

**SYSTEMATIC AND SYNONYMIC LIST OF
BULGARIAN GEOMETRIDAE**

(Lepidoptera)

(Julius GANEV)

The Bulgarian Macrolepidoptera fauna was studied in the 19th century. BACHMETIEV published a list in 1902 and REBEL published a revised catalog of Balkan Lepidoptera in 1903. Using the latter publication I. BURESCH and Kr. TULESHKOV published "The horizontal distribution of Macrolepidoptera in Bulgaria", 1929-1943. The Geometridae volume was written in 1936-37, and 337 species were reported. In that paper some 85 additional species of Geometridae were reported.

The present list contains three species new to the Bulgarian fauna : Idaea spissilimbaria Mabille (det. DUFAY), from Vitosha mountain (leg. BURESCH); Eupithecia thurnerata Schütze (det. MENTZER) from the Kresna defile and Eupithecia egenaria Herrich-Schäffer (det. MENTZER) from Sofia (leg. BOTCHAROV). Psodos trepidarius Hübner from the BURESCH & TULESHKOV publication turned out to be P. coracina Esper after the revision of Dr. VARGA. Dyscia conspersaria Fabricius was determined erroneously too. After examination of the material in the Sofia National Natural History Museum, sampled from various localities in Bulgaria the author determined it as Dyscia sicanaria Oberthür.

With the new species the list of Bulgarian Geometridae totals 425 species. As subfamilies Sterrhinae and Larentiinae and some parts of the country are not thoroughly studied and having in mind the Lepidoptera fauna of the neighbouring countries some 30 species more are still expected to occur in Bulgaria. The arrangement of the present list is based on FORSTER & WOHLFAHRT "Die Schmetterlinge Mitteleuropas", Band V, Geometridae, 1980. Some nomenclatorial changes are added in accordance with D.S. FLETCHER "The Generic Names of Moths of the World", vol. 3, Geometroidea, 1979. The species found in localities not belonging to Bulgaria since 1945 are excluded from the list.

GEOMETRIDAE

I. Achiearinae (Brepinae)

ARCHIEARIS Hübner
(BREPHOS auct.)

1. parthenias Linnaeus
2. notha Hübner
(nothum Hübner)

II. Oenochrominae

- ALSOPHILA Hübner
(ANISOPTERYX Stephens)
3. aescularia Denis & Schiff.
 4. aceraria Denis & Schiff.

4e EUROPEES KONGRES VOOR LEPIDOPTEROLOGIE

Het 4de Europees Kongres voor Lepidopterologie, georganiseerd door de Societas Europaea Lepidopterologica (SEL), wordt in april 1984 gehouden te Budapest, Hongarije, onder voorzitterschap van dr. L. A. GOZMÁNY, verbonden aan het Natuurhistorisch Museum van Budapest.

Het hoofdthema van dit kongres vormen de niet of slecht onderzochte gebieden in Europa, in het Engels "Unexplored areas" en in het Duits "Weisse Flecken" genoemd. Daarnaast worden er echter nog vele andere onderwerpen behandeld. Het is beslist nodig om zeer lang op voorhand in te schrijven voor dit kongres omdat de autoriteiten van de Oost-bloklanden een heleboel formaliteiten voorschrijven die een lange voorbereiding vergen. Later ontvangen de voorlopige inschrijvers dan een definitief inschrijvingsformulier. Inschrijven kan bij de sekretaris : W. DE PRINS, Diksmuidelaan 176, B-2600 BERCHEM-Antwerpen.
